8 telephone and the multiple telephones based on an IP addressing  
9 scheme, and  
10 a user interface application that is configured to provide a  
11 user-dependent interface to a user of each telephone of the  
12 multiple telephones, based on a user-profile of each user of the  
13 multiple telephones, the user-profile of each user being accessible  
14 via the data network.

1 23. (Currently Amended) A method for using a voice  
2 communications device on a data network, comprising:  
3 providing a gateway for interfacing a voice communications  
4 network with the data network;  
5 providing a user with a unique VoIP-name;  
6 providing a profile page on the data network, the profile page  
7 being associated with the VoIP-name, the profile page comprising  
8 user-specific information;  
9 accessing the profile page using the voice communications  
10 device, the voice communications device having an IP address; and  
11 temporarily associating the VoIP-name with the IP address.
